

GOEX Fund Description

The Global X Gold Explorers ETF tracks an index of companies engaged in the exploration and early stage production of gold. The index uses market cap selection and a modified market cap weighting scheme.

GOEX FactSet Analytics Insight

“ high risk and high reward ”

GOEX charges a high but reasonable fee for aggressive exposure to the gold production chain. It targets early stage gold exploration, mining, and production firms. It is a high risk and high reward

play. A company can see significant upside if it discovers a mine that is rich in reserves, secures financing, and ramps up production. Conversely, a company can collapse if it fails to generate a steady revenue stream. Despite the primary listing and incorporation locations of the firms in the fund, their projects are dispersed around the world, and some are in geopolitically unstable markets which subject them to material and acute geopolitical risk.

GOEX completed its transition from Solactive Global Gold Explorers Total Return Index to Solactive Global Gold Explorers & Developers Total Return Index on 5/1/2017. It is a material change that significantly broadens GOEX's exposure and reduces holding concentration. Furthermore, the new index uses a market cap selection scheme rather than the liquidity selection scheme of its old index.
