

ETF Fund Flows Tool Guide

The ETF Fund Flows tool enables the analysis of investment flows across all U.S. ETFs. Flows for ETFs can be analyzed for all ETFs after their inception date, dating back to Jan. 29, 1993. The tool has two primary pages: the landing page and the results page.

ETF Fund Flows Landing Page

The ETF Fund Flows landing page has four components that provide different insights into fund flows:

- **Input Form:** Sets the criteria for the results page
- **Top Inflows and Outflows table:** Shows top flows for the last week
- **ETF Flows News Section**
- **Flow Report History Table**

ETF Fund Flows Input Form

In the Fund Flows Input Form, you set the criteria for your analysis. You can input the following:

- A list of ETFs
- The date range you wish to analyze for the ETFs above
- A time interval for your analysis
 - The time interval will aggregate fund flow data for the selected interval.
 - For example, a monthly interval will show the sum of daily fund flows for all days in the month.

The Reset button will clear your selections and inputs for ticker, date range and time interval.

ETF Fund Flows Input Form

After completing the input form, click the Submit button to be taken to the results page.

BND	Vanguard Total Bond...	892.43	View

* Weekly flows in USD millions

Input ticker, dates and time interval

Top Inflows and Outflows Tables

Top Inflows and Outflows Table

The Top Inflows and Outflows table displays the five ETFs from the last week that had the greatest net inflows (new capital entering the ETF) and net outflows (capital exiting the ETF). The data in the table is scaled to represent millions; for example, a value of 800 would indicate USD\$800M in inflows for an ETF.

Clicking the View button in the table will take you to the Fund Flows results page for the selected ETF for the last week.

ETF Flows News Section

The ETF Flows News Section contains all of etf.com's coverage related to ETF Flows. The tabs at the top of the section indicate the different topics covering ETF Flows. ETF League Tables cover primarily assets under management (AUM) to provide a ranking of the ETF issuers in the market.

ETF Flow Report History Table

The ETF Flow Report History Table contains links to flow reports for specific quarters and years. Clicking the links in the table will take you to the story that covered ETF Flows for the labeled period.

ETF Fund Flows Results Page

The ETF Fund Flows Results Page displays the output according to the parameters selected in the input form on the landing page. The Results page has three major components:

- [Flow Summary](#)
- [Flow Chart](#)
- [Slow Detail](#)

Flow Summary

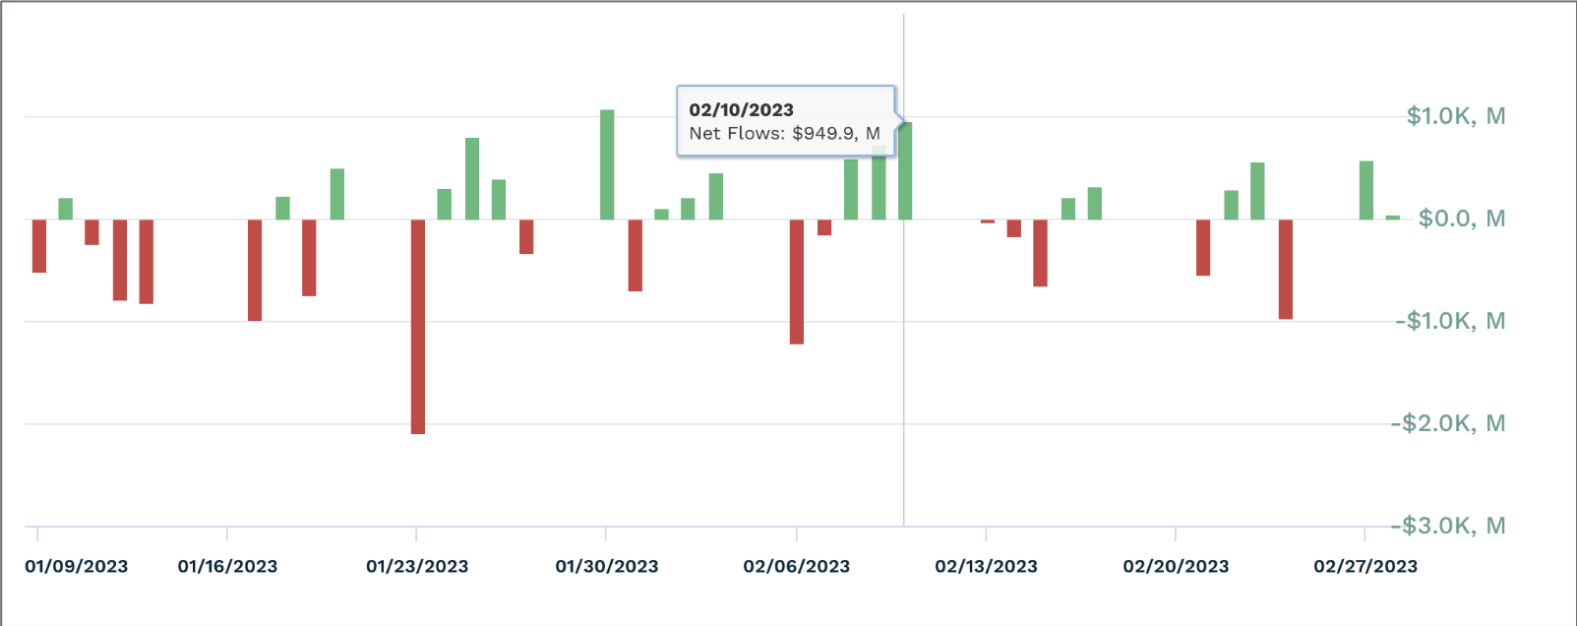

The Flow Summary section includes the aggregate fund flows for each ETF in the selected period. The aggregate fund flows provide the sum of the net flows according to the date range specified.

The Add buttons in the Flow Summary Table give you the ability to add an ETF to the watchlists of your choice.

The Flow Summary Table also includes the date range and interval input parameters, which can be adjusted if you would like to iterate on your Fund Flows analysis.

Flow Chart

The Flow Chart section includes a chart of the flows for the specified ETFs according to the input parameters. Inflows are represented by green bars; outflows are represented by red bars. Do note that it is common for ETFs, particularly smaller funds, to have no flows on a given day. Hover over an individual bar to see the specific date and flow amount for the highlighted period.

Hover over a data bar to see the individual flows and date for the selected period.

ETF Fund Flows Results Page

The Flow Detail Table includes all the underlying data used to create the charts in the Flow Chart section. Each row in the table will represent the flows for the labeled day. Each of the input ETFs are included as their own column. An aggregate column that sums the total for each row is also available.

The Flow Detail Table can be navigated or expanded using the pagination options at the bottom of the table. The Export To Excel button will generate the table in pdf form.
